

Herring Skinning Machine

Based on the BAADER 56, this machine is especially designed for small and medium-scale application in the delicacies field. It skins very delicate products, such as pickled and marinated butterfly fillets from herring or slightly salted butterfly fillets from herb herrings. The BAADER 66 is a stand-alone machine which is mobile on rollers. The butterfly fillets are arranged manually by one or two persons on the conveyor belts and submitted to a gentle skinning process. Upon request, a piece cutter is available for this machine as well.

Operator requirements	1 or 2 persons
Throughput rate	up to 60 single fillets/min depending upon the fish size and the skill of the operator
Power consumption	0.75 kW
Water consumption	abt. 3 l/min
Dimensions	abt. 2.50 x 1.04 x 1.40 m
seaworthy packaging	abt. 2.85 x 1.10 x 1.55 m
Weight	abt. 490 kg net abt. 585 kg gross
